USER MANUAL
ATHERTON DOWNHILL AM

WELCOME

Welcome to the Atherton Bikes family! To say this brand has been a lifetime in the making is no exaggeration, Dan built his first bike in 1992 when he was just 10 years old. But by 2019 our dream of pushing bike development as hard as we push our riding became irresistible.

We started Atherton Racing so that we could push boundaries; from building tracks to producing edits or events it's all been about doing it our way. Now we have put our hearts and soul into our own bike company and along with our amazing design, engineering and management team have designed a range of bikes with the same attention to detail we apply to our racing.

Having the right bike for you can transform your experience. Our aim is to see kids, all mountain explorers, bike park shredders, racers and e-bikers enjoying our bikes.

Dan, Gee & Rach.

The Atherton Downhill AM

Whether it's the countdown beeps in the start-hut or the first kicker at the park, we've made sure this bike can do it all. Tested on the toughest proving ground in the World, this bike has already taken 3 podiums at World level. Refined from race to race this bike just got faster throughout the season. But it wasn't just tested against the clock! Boosted to the highest heights in Dyfi Bike Park this bike delivered; super agile and responsive in handling with a suspension feel which soaks up the burliest of terrain, giving you confidence to go faster. We'll guarantee you'll love this bike.

ASSEMBLY INSTRUCTIONS

When you receive your new Atherton Bike there are just a few simple steps to getting your bike out of its box and out on to the trails.

To make sure all your components are working perfectly, every Atherton Bike is assembled and checked by our team of expert mechanics before being sent to you.

To make sure that your new ride is secure in transit, we then remove some components, the wheels, handlebar, and forks and pack them securely in the box.

Assembling your bike couldn't be easier with our step-by-step assembly instruction guide. If you need any extra assistance, please don't hesitate to get in touch with one of the team, we'd be more than happy to help.

Grab your tools, make a brew, and get building!

FROM BOX TO BIKE

Step 1: Fork and handlebars

Install the lower crown & steerer into the headset, attaching the upper crown and stem to the steerer tube. Preload the top cap and tighten the clamp bolts. Clamp the stanchions through both crowns.

Step 2: Front Caliper

Bolt the front brake caliper to the fork's lower leg. This must be centered with the brake rotor once the wheel is installed.

Step 3: Rear Derailleur

Fasten the dérailleur to the hanger, ensuring that they are aligned correctly (with b-tension screw in contact with the dérailleur's plastic washer rather than the hanger itself).

Step 4: Wheels

Inflate the tyres and install the wheels onto the bike. Ensure the axles are torqued as per the provided values.

Step 5: Pedals

Fit the pedals of your choosing. Please note: the non-driveside pedal has a left-hand thread (removes clockwise, installs counter-clockwise).

Step 6: Saddle Height

Alter the saddle height as required. And... RIDE!

SUSPENSION SETUP

Fork and rear shock suspension set up is essential to getting the most out of your Atherton Bikes DW6 suspension system.

Learn how to set sag, air spring pressure, compression adjustments, rebound adjust, additional tuning options and more in the tuning guides below.

The recommended settings in the tuning guides attached are designed to be a starting point so that you can get out on your first ride as soon as possible! If you would like further assistance tuning your suspension to get the most out of your bike, please drop us an email, we'd love to help.

Hubs	Remove wheels and check bearings for wear			X	
Bottom Bracket	Remove cranks and check bearings for wear			X	
Chain	Check for stretch, inspect for damage			X	
General	Full service				X
Shock & Fork	Full service	As per manufacturers recommendations			

TESTING AND STANDARDS

Before we launched our bikes to the public we subjected our frames to the most rigorous testing imaginable at EFBE in Germany, the world's leading laboratory for mechanical tests on bikes.

EFBE's TRI-TEST® goes way beyond established international standards and reflects the specific challenges faced by modern bikes. Our bikes were tested to Category 5 which means they are suitable for downhill rides at extreme grades with large jumps and drops, at speeds exceeding 40 km/h

The TRI-TEST® includes fatigue tests, maximum load tests and overload tests to provide a simulation of the stresses experienced throughout a bike's entire life.

But testing a newly printed, box-fresh frame is not for us; we sent a bike that Dan Atherton had thrashed at Dyfi Bike Park for six harsh months. It passed with flying colours.

WARRANTY

PARTIES

"we/us/our" - Atherton Bikes Limited

"you/your" - The Customer

THE WARRANTY

The warranty applies to all bicycle frames, including made to measure or bespoke frames, purchased from us. We guarantee that all frames will be free from defects in the materials or workmanship for the lifetime of the product. Where the frame develops a fault which is due to a defect in the materials used or the workmanship we will repair the frame free of charge. If we cannot repair it we will inform you of this and offer a like for like replacement.

The warranty does not cover damage to paint or anodizing damage.

The warranty also does not cover any items purchased other than bicycle frames and does not include the consumable components of the bike. Consumable components are those components which have are typically expected to need replacing within a 12 month period of being fitted to the bike. Consumable components include:

- Tyres;
- Chain
- Cassette;
- Grips;
- Chainring;
- Brakepads;
- Cables

This list is not exhaustive and if you are not sure whether a component is covered by the warranty please contact us to discuss it further.

All other original parts or components which are not covered by this warranty may be covered by a warranty from the original manufacturer.

WARRANTY CONT.

We are only able to offer the warranty where:

1. the frame has been maintained according to the care and maintenance instructions which were provided to you at the point of sale; and
2. the bicycle has been used only according to the description in the product manual.

REPAIRS WHICH ARE NOT COVERED BY THE WARRANTY:

The following damage is not covered by the warranty:

- Normal wear and tear;
- Crash damage, including impact to carbon fibre elements or other overloading;
- Improper assembly;
- Corrosion;
- Modifications to the frame;
- Damage as a result of not adhering to the minimum inserts of depth of seat post;
- Damage caused by excessive load outside of what is expected in normal riding;
- Impact damage (for example caused by collisions);
- Damage caused as a result of transportation of the bike, including transport where the bike was attached to a vehicle or a lift.
- Damage which we (in our sole discretion) assess to be the result of a lack of care and maintenance, or maintenance which is not in line with the maintenance instructions which have been provided to you.
- Damage caused by the use of non-compatible components with the bike frame. A full list of components which are compatible with the bike frame are set out in the product manual.

WARRANTY CONT.

HOW TO MAKE A CLAIM:

To make a claim you should contact us by phone or email. You will need to provide your name, details of your frame, a copy of your original purchase order and the date of the original purchase.

We will ask for a description of the fault and photographs or a video showing the fault. We will carry out an assessment based on the images provided and make a decision on whether the fault is covered by the warranty and inform you of our decision. Where necessary we will request further information from you. In some circumstances we may need to carry out a physical inspection of the frame before we can make a decision and if this is the case we will require that the bike is returned to our workshop. You can either bring the bike back to our workshop or alternatively we can arrange to collect it from you.

If the damage or fault is covered by the warranty we will arrange a date for you to bring the bike to our workshop, or for us to collect the bike, so that we can repair it (provided that you have not already brought the bike to our workshop so that we may assess the damage).

All decisions about whether the damage or fault is covered by the warranty will be made at our sole discretion.

TIMEFRAME:

We aim to complete the repair within 90 days of you returning the bike to us. If there is a delay in carrying out the repair we will write to you to inform you of this.

If we need to replace your bicycle frame we will aim to do this within 90 days of informing you that we will replace the bike. Where we need to replace the frame it will be a like for like replacement, or if the same frame is not available, we will replace it with a frame of an equivalent standard.

We will return your repaired bike, or replacement bicycle frame, to you free of charge. Alternatively you can collect the bike from our premises.

WARRANTY CONT.

IF YOU ARE NOT THE ORIGINAL OWNER

This warranty is personal to the person who purchased the bike frame from us and we are only able to offer the warranty to such person.

OTHER CLAIMS

The repair or replacement offered through this warranty is your sole remedy for a defective bicycle frame.

We will not be liable for any direct, indirect or consequential losses arising from the purchase, use or ownership of the bicycle by you, including for personal injury, property damage or economic loss (except where it would be unlawful to do so, including where death or personal injury is as a result of our negligence).
